

It's so easy...

Seat rotated and extended to make access much easier!

2-Door car

Seat slid fully rearwards to achieve maximum leg clearance during seat rotation.

4-Door car

The solution to car access problems

- Simply replaces your original car seat
- Specifically designed for 2 or 4 door vehicles
- Individually designed for each model
- Easy to install
- Incorporates a built-in, adjustable lumbar support
- Latest Pirelli suspension
- Fully reclining
- Upholstered in heavyweight material as used by leading car manufacturers
- In certain cases an existing seat may be converted
- Original seat can be refitted when required since no modification is made to the vehicle

This is how it works...

Release the lever and the ingenious eccentric pivot allows the seat to swing around and out beyond the doorway where it is readily accessible. With the passenger seated the seat can be swung back easily into the travelling position, making it unnecessary to twist the body to get the users legs into the car.

The installation of a Rotating Seat in some vehicles may reduce headroom by approximately one inch.

The more we know about the user in terms of height and mobility problems the more help we can offer.

For a no-obligation quotation for your car please complete the questionnaire enclosed. Full details of the car are essential for us to supply the correct unit.

Our policy is one of continuous product development and improvement, Elap reserve the right to change printed specifications and/or prices and will endeavour to advise customer at time of ordering.
